Full-text exclusion taxonomy (n = 46)

Per the PRISMA 2020 flow diagram (Figure 1), 46 reports were excluded at full-text assessment after retrieval of 74 of the 75 candidates from title/abstract screening. This appendix records the primary exclusion reason per excluded PMID, with the PASS/FAIL markers captured against each of the four pre-specified inclusion conditions: FM-named, Texture-feature family, Per-arm performance reporting, and Modality scope.

Aggregate breakdown by primary exclusion reason

n	Primary reason
23	No qualifying pretrained foundation model (custom architecture, unnamed pretraining, or no pretraining)
11	Fusion-only without arm-specific performance reporting
9	First-order radiomics only (no texture-feature family)
2	Other protocol-nuance reasons
1	Non-medical or off-scope modality
46	Total

Per-PMID exclusion detail

Each row records the exclusion stage (Stage 2 random MAYBE sample or Stage 3 remaining MAYBEs), the PMID, the primary exclusion category, and the per-field PASS/FAIL markers from the structured screening log. Where multiple FAIL flags were present on a single record, the highest-priority reason was assigned in the Primary Category column.

Stage	PMID	Primary reason	FM	Tex	Arm	Mod
